Whitepages PRO

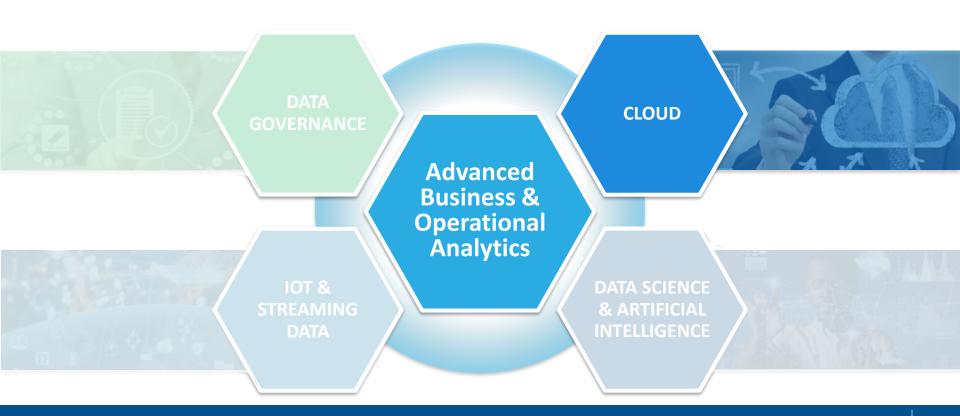

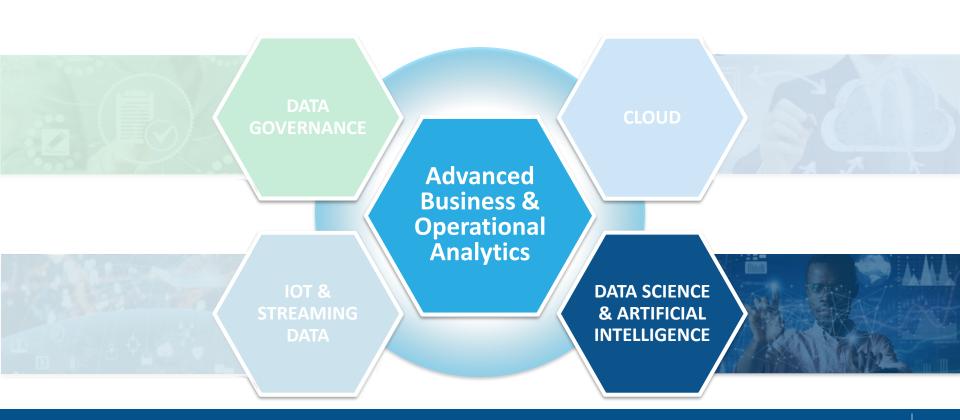

Big Iron to Big Data

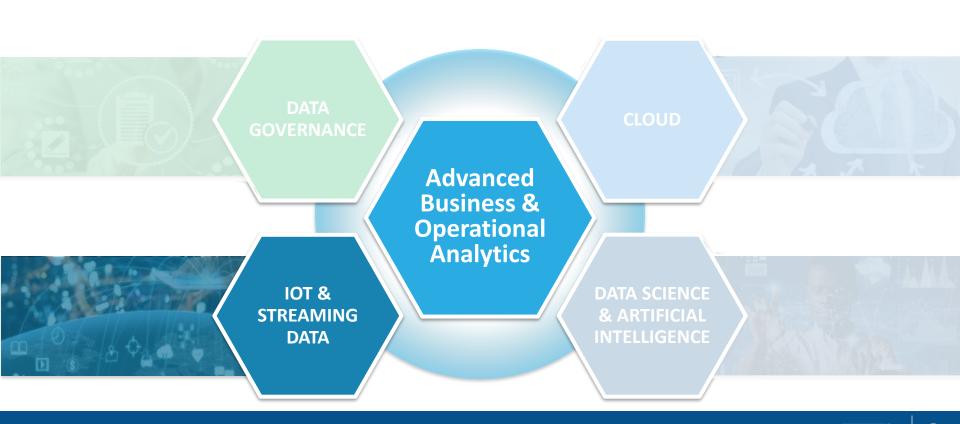

A fast-growing market segment composed of solutions that optimize traditional data systems and deliver mission-critical data from these systems to next-generation analytic environments.

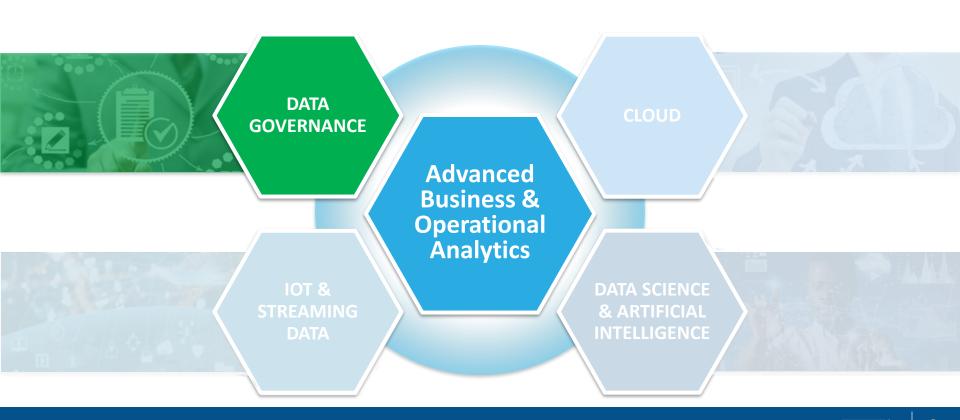

Farm to Table

Data Governance

Business imperative across platforms and deployment models, on-premise and in the cloud

GOALS

- Regulatory compliance
- Understand data context, meaning
- Accuracy, completeness, consistency, relevancy, timeliness, validity of data

CHALLENGES

- Multi-platform, data volume and complexity
- Diversity and consistency of sources
- Compliance demands: broader & deeper

Data Governance

Requires a multi-faceted approach

QUALITY

- Discover sources of, relationships between, data
- Apply business rules to measure data quality continuously

SECURITY

Protect the confidentiality, integrity and availability of data

LINEAGE

 Get insights into where data came from, what changes were made and where it lands

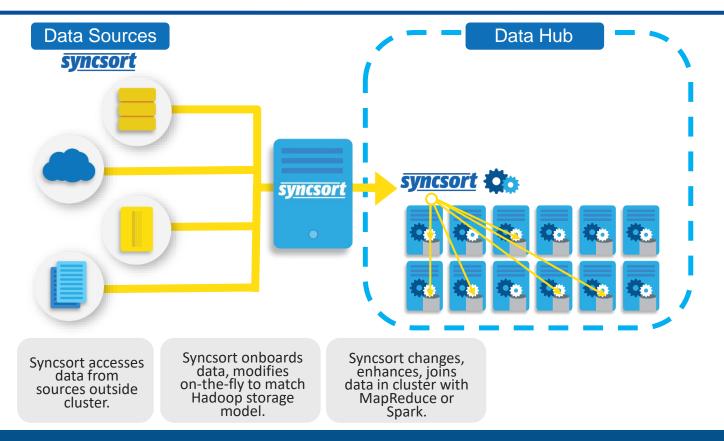

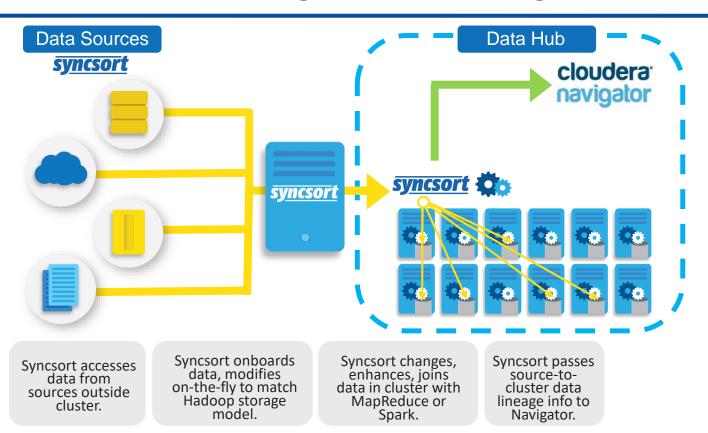

Data Sources

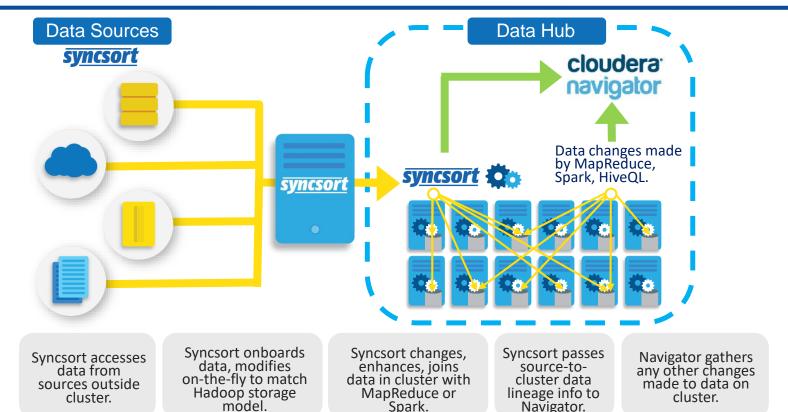

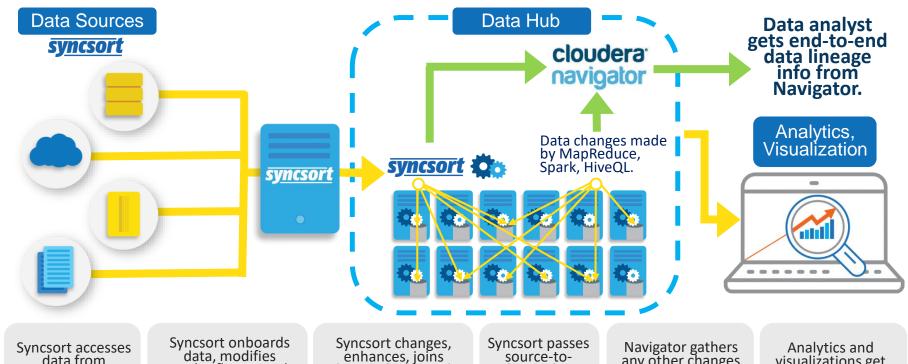

Syncsort accesses data from sources outside cluster.

on-the-fly to match Hadoop storage model.

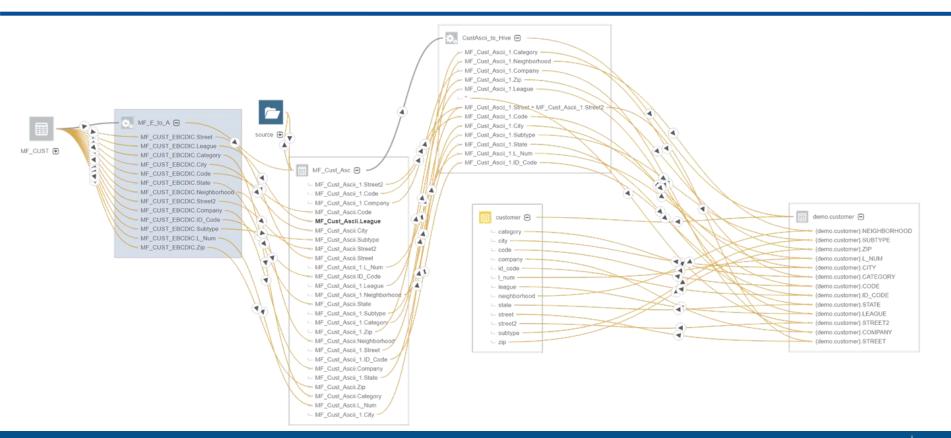

enhances, joins data in cluster with MapReduce or Spark.

cluster data lineage info to Navigator.

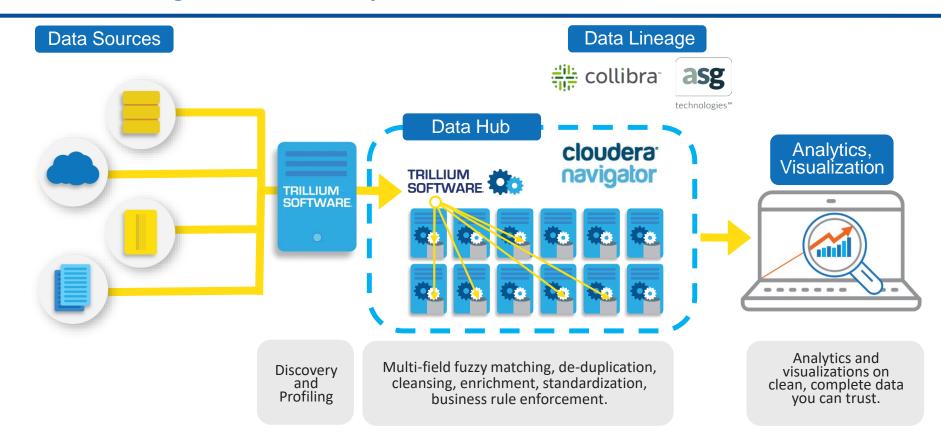

any other changes made to data on cluster.

visualizations get complete data.

Syncsort DMX-h + Cloudera Navigator for End-to-End Lineage

Data Lineage + Data Quality = Foundations of Data Governance

Anti-Money Laundering Solution on CDH at Large Global Bank

- Challenge: Meet AML transaction monitoring and FCA compliance demands
 - Data too large, diversely scattered to analyze
 - Disparate data sources -- Mainframe, RDBMS, Cloud, etc

Requirements:

- Consolidated, clean, verified data for all analytics and reporting.
- MUST have complete, detailed data lineage from origin to end point
- MUST be secure: Kerberos and LDAP integration required
- Need unmodified copy of mainframe data stored on Hadoop for backup, archive

Anti-Money Laundering Solution on CDH at Large Global Bank

Solution:

- Syncsort DMX-h to create "Golden Record" on CDH for compliance archiving
- Trillium Quality for Big Data for cluster-native data verification, enrichment, and demanding multi-field entity resolution on Spark framework
- Full end-to-end lineage to Cloudera Navigator, from all sources, through transformations, to data landing, including HiveQL changes

Benefits:

- New financial crimes data hub produces high performance results at massive scale
- Bank meets stringent Anti-Money Laundering compliance requirements
